

With the new normal of disinfecting surfaces in spaces where people are using upholstered furniture, we are now challenged to specify textiles that can be frequently cleaned/disinfected

1.

Start with the disinfectants recommended by the EPA for use against SARS-CoV-2.

What is currently used or inventoried in your office day 1 for cleaning existing furniture?

2.

3.

While logged in, you can search and edit upholsteries by the actual product name of approved disinfectants.

Click the cleaner filter in your search options to find upholsteries that have been tested for use with those products.

Not everyone will want coated fabrics (vinyl or polyurethane or Silicone) although they are the easiest to clean.

Always share the care guide found under resources for a particular pattern.
